# AN IMPRESSIVE HERITAGE

The impact of the Canterbury earthquakes remains immeasurable, including the devastation caused across the residential sector. At the helm of providing experienced; trusted; innovative and highly-respected construction services is Whyte Construction.

The heritage of the business' staff and its expertise has given Whyte Construction an impressive reputation. It is this reputation that earned the business one of its more challenging repair and build projects – Woodlau Rise.

From non-compliance issues, to water damage, cracks in the cladding, a damaged roof and windows, and a floor sagging and falling away, the team was faced with a nine-month repair and build effort.

A two-level, four bedroom home, this beautiful new property boasts two lounges; an additional rumpus room and

three bathrooms. Its unique point of difference is also the fact it is built on a steep hillside. Project Manager Jeremy Cook comments, "It is definitely more challenging with a hill build.

"We had to work with the existing structure and this meant stripping the building back to framing, in stages, and assessing earthquake, compliance and structural issues. Then we had to rebuild to meet and exceed Council and client expectations."

Homeowners Maurice and Eileen Duncan say of the job, "We were introduced to David Whyte at Whyte's through the architect who held them in very high regard."

"Dave was instrumental in everything from the assessment through to the insurance side of things. The whole business was very professional as was the excellent workmanship. They met the deadline and we couldn't be happier."
